

# NURTURE SEQUENCE v6 · 15 PROMPTS THAT DON'T LOOK LIKE CHATGPT

4 emails · Days 1 to 4 · Sender: James · Cruz Creative voice

Every email opens on a hook. No greeting before it.

---

## EMAIL 1 · DAY 1

**Subject:** Nobody is going to ask you the price **Preview text:** Put it on the graphic

---

[first name],

You're running an offer this week and the only place it exists is in your head.

So you post a photo of the thing, write a caption about how great it is, and wait for someone to DM you asking how much. Nobody does. They scroll. Not because they weren't interested, but because working out whether they could afford it was too much effort at 8pm on a Tuesday.

Prompt 14 turns that into a graphic that does the work for you.

Three levels of text and no more. The offer is the biggest thing on there. The price is second. Everything else is small. And the price has to survive being shrunk to the size of a stamp, because that's roughly how big it is in a feed.

That's the rule most people get wrong. They make the business name the hero. Nobody is deciding based on your business name. They're deciding on what it is and what it costs.

No starbursts. No fake price tags. No clip-art discount stickers. Your colours, your fonts, plenty of empty space, because crowded reads cheap.

Take whatever you're promoting this week and paste prompt 14. Then run the add-on and it gives you the story version with the top and bottom kept clear, so nothing important sits under the interface.

One thing. Don't take the first image. Click edit on it, comment top right, name the problem. Price too small. Lose the badge. More space at the bottom. It fixes that one thing instead of starting over.

## EMAIL 2 · DAY 2

**Subject:** We cancelled a photoshoot last month **Preview text:** One phone photo. Eleven assets. Same afternoon.

---

[first name],

Four figures for a half day. Photographer, stylist, studio. Two weeks before we'd see anything back.

That was the quote for one client's product shots. We didn't book it.

Instead: one photo on a plain table by a window, taken on a phone. Prompt 04 to re-shoot it as a studio image. Prompt 10 to build five scenes around the same product. Designer checked every frame, binned two, kept the rest.

Eleven assets. Same afternoon. Nobody could tell.

Why those two work when the prompts people normally type don't: most of the words are about what must NOT change. Same label. Same proportions. Same text on the packaging. Leave those lines out and AI quietly redesigns your product. Now you've got a beautiful photo of something you don't sell.

Find the worst product photo on your phone. Plain surface, near a window, upload, paste prompt 04.

Then prompt 10. List all five scenes in the first message even though you generate them one at a time. That's what keeps the colours matching, so they sit in the grid like one shoot and not five random images.

James

---

## EMAIL 3 · DAY 3

**Subject:** You already filmed a fortnight of content **Preview text:** Then you buried it in a folder

---

[first name],

You've already filmed two weeks of content. You posted it once and left it to rot.

The webinar. The podcast episode. The long video from March that got 400 views and then nothing. That's the content you keep telling yourself you don't have time to make.

Prompt 07 gets it out.

Paste the transcript. Back comes the eight strongest moments, ranked, and for each one exactly which parts to crop and how to stitch them. You're cutting footage that already exists. Plus a hook for the first three seconds, because the original opening won't survive cold.

The line doing the heavy lifting: I cannot invent video, it has already been recorded. Without it, AI writes you a brilliant script for footage you'll never have, and you sit in the edit trying to force it.

Highest return in the pack. One recording session becomes two weeks of posts, and the recording is already done.

Got a transcript? Tonight. Haven't? Most platforms hand you one off the video in two clicks.

James

---

## EMAIL 4 · DAY 4

**Subject:** The manual version **Preview text:** What happens when you stop doing this by hand

---

[first name],

The pack you've got is the slow version of how we work.

Every prompt in it is real. Every one still needs you to open a tab, paste, wait, check, tweak, save, upload. Fine for a few posts a week. Not fine when content is a business function.

So we wired it up. One video in. Transcript mined for the strongest moments. Scripts out in the brand's own voice. Captions drafted per platform. Carousels designed and finished. The whole package lands in one board, waiting for a human to say yes. Then it schedules itself.

Same thinking as your fifteen prompts. Nobody doing the pasting.

If content is eating hours you'd rather spend on the actual business, that's a 20-minute call. No deck. I'll ask where your week goes and tell you straight which bits are worth automating. If you don't need us yet, I'll say that too.

[Book a 20-minute call →]

Or keep using the prompts. Emails carry on either way.

James

---

## NOTES

Prompts referenced: 01, then 04 and 10, then 07. Re-check if the pack gets reordered.

Hooks, for reference:

1. People can tell your graphic was AI before they've read a single word on it.
2. Four figures for a half day.
3. You've already filmed two weeks of content. You posted it once and left it to rot.
4. The pack you've got is the slow version of how we work.

Four days back to back is fast. Right call for momentum, since the first three all ask them to go and do something. Watch day 3 unsubscribes. If they spike, push email 4 to day 6 and leave the first three where they are.

Email 4 goes to a call, not the course waitlist. Course is parked until the proof phase lands case studies. Waitlist variant available if you want it back.

Prompt 03 is deliberately out. Strongest prompt in the pack, so it's the best subject for the first weekly email after this sequence ends.
